

Can we Change the Debate on Climate?

Our Shared Planetary Energy Future: Revolutionizing the approach to solving the leading crisis of energy poverty

Date: January 17, 2024

Time: 10AM—2PM

Location: Keiser University Flagship Campus
West Palm Beach, FL

Have you ever wondered about the relationship between ensuring effective and environmentally friendly energy, lifting masses out of poverty and promoting gender equality? While at first glance, these issues are very far apart, in fact, there's an immediate and growing connection between them!

Noted South African physicist **Dr. Kelvin Kemm**—past Chairman of the South African Nuclear Energy Corporation, a Plenary Guest Speaker at the African Union Economic Summit in Mauritius in 2017 who has also spoken to the US Senate and Congress in Washington, D.C., and **Princess Mthombeni**—founder of “Africa4Nuclear”, speaker at numerous world forums, including the 2023 COP28, advocate of empowering girls and women through education and technology, and a world where no one

is left behind and everyone can live with dignity and opportunity, will speak about the exciting world of energy rich technologies and the many recent technological progresses, including smaller nuclear power plant, design, and the non-fossil fuel technology of thermonuclear nuclear fusion. They will provide a surprising and exciting personification of a new, cross-generational form of thinking and cooperation for a positive future, devoid of faddism, ideology and political posturing, and filled with hope for the future. All young people interested in being energized through optimism and clarity about our science future should be interested in attending.

QUESTIONS AND RSVP: Lynn J. Yen 917-214-1264 lynn@sciencetruths.org
